

*Increase the coverage  
of your Xcam 2*

**Product number : Robocam**

## Benefits

With the Xcam2, it is already possible to transfer pictures and sound to a TV set or a monitor, with high quality resolution, even through walls and ceilings. The Robocam increases the coverage of your Xcam2 to its maximum : it moves from left to right, up to down, in order to cover a 240° angle.

With the remote control (included) you can remotely move the position of the camera to monitor whatever you want, and you can store up to 4 key positions, ideal when you are away.

This system is expandable : the Remote lets you control up to 4 Robocams or scan each of them so as to display the image from each camera in turn on your TV.

Now thanks to the Robocam, no place in your home can escape from X10's watchful attention !

## Key Features

- Motorised camera, with 240 ° angle cover
- Can be moved remotely with an X10 remote
- "Sweeps" between the 4 programed positions
- Expendable system to 4 Robocams

## Technical data
